Summary

Sometimes you need to check or change configurations on a VM. If the VM has connectivity, you may want to try any of the following methods.

LabBox

<https://aka.ms/LabBox>

- For the purpose of training or following along with this TSG, you can use the following link to deploy a VM with this scenario built-in. You will need to enable JIT for the VM. This lab is not to be shared with customers.

Instructions

If you have connectivity to the VM, you have multiple ways to do this:

- If the VM is healthy and the guest agent is running, using Run Command and RDPSettings is an easy way to verify the RDP settings of a VM.

Dashboard > Microsoft.Template-20220505100707 > vmcontainers > changedPortVM

Run Command uses the VM agent to let you run a script inside this virtual machine. This can be maintenance. Select a command below to see details.

Name	Description
RunPowerShellScript	Executes a PowerShell script
DisableNLA	Disable Network Location Awareness
DisableWindowsUpdate	Disable Windows Update
EnableAdminAccount	Enable Administrator account
EnableEMS	Enable Event Monitoring Service
EnableRemotePS	Enable Remote PowerShell
EnableWindowsUpdate	Enable Windows Update
IPConfig	List IP configuration
RDPSettings	Verify RDP settings
ResetRDPcert	Reset Remote Desktop Certificate
SetRDPport	Set Remote Desktop port

Run Command Script

RDPSettings

Script execution complete

Details
Checks registry settings and domain policy settings. Suggests policy actions if machine is part of a domain or modifies the settings to default values.

Script
No parameters

Run

Output

```
Not domain joined
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\PortNumber: 3390
HKLM:\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services\fdenyTSConnections:
HKLM:\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services\KeepAliveEnable: 1
HKLM:\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services\KeepAliveInterval: 1
HKLM:\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services\KeepAliveTimeout: 1
HKLM:\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services\fdisableAutoReconnect: 0
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\fdinheritReconnectSame: 1
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\fdinheritMaxSessionTime: 1
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\fdinheritMaxDisconnectionTime: 1
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\MaxDisconnectionTime: 0
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\MaxConnectionTime: 0
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\fdinheritMaxIdleTime: 1
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\MaxIdleTime: 0
HKLM:\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\MaxInstanceCount: 4294967295
```

Different ways of access to the VM

- [Access thru Remote Services Console](#)
- [Access thru PSSession](#)
- [Access thru PsExec](#)
- [Access thru Remote Registry](#)
- [Access thru CSE Powershell](#)

Different ways to change services setups

- [Check or set a Windows service through registry](#)

Using CSE and Powershell to query and setup values on the registry

1. How to query the port number for RDP using CSE:

```
(Get-ItemProperty -Path 'REGISTRY::HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp' -Name "PortNumber"
```

2. Now to get the result of this custom script, we need to use Powershell to check the output of the script using such a command:

```
PS C:\> (Get-AzureRmVMExtension -ResourceGroupName $RG -VMName $VMName -Name CustomScriptExtension -Status).SubStatuses.Message  
51321
```

3. And then used CSE to change the Port number via registry

```
Set-ItemProperty -Path 'REGISTRY::HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp' -Name "PortNumber"
```

4. And then i again used custom script extension to change the Port number via registry

```
Set-ItemProperty -Path 'REGISTRY::HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp' -Name "PortNumber"
```

There was no need to delete the VM, mount the VHD to another VM, change the registry, and then create a VM. This will save you a lot of time. We should use custom script extension when possible to reduce troubleshooting time and solve issues quickly.

Need additional help or have feedback?

<i>To engage the Azure RDP-SSH SMEs...</i>	<i>To provide feedback on this page...</i>	<i>To provide kudos on this page...</i>
If you are in the OneVM team then reach out to the RDP-SSH SMEs AVA channel via Teams. If you are a VM Delivery Partner then follow your team's process for swarming or ask your TA. Make sure to use the Ava process for faster assistance.	Use the RDP-SSH Feedback form to submit detailed feedback on improvements or new content ideas for RDP-SSH. Please note the link to the page is required when submitting feedback on existing pages! If it is a new content idea, please put N/A in the Wiki Page Link.	Use the RDP-SSH Kudos form to submit kudos on the page. Kudos will help us improve our wiki content overall! Please note the link to the page is required when submitting kudos!
